BO-001	Youngho SON	Welding Characteristics of Reduced-Activation Ferritic/Martensitic Steel
BO-002	Yongjoon KANG	Effect of Welding Process Variables on the Delta Ferrite Fraction in Reduced-Activation Ferritic/Martensitic Steel Weld Metal
BO-003	Hyungkwon PARK	Hydrogen-accelerated Creep Degradation at High Temperature in Reduced Activation Ferritic-Martensitic Steel
BO-004	Yi-Hyun PARK	Codification of Korean Reduced Activation Ferritic/Martensitic Steel, ARAA, in RCC-MRx
BO-005	Pierluigi MOLLICONE	RCC MRx Type P structural integrity assessment of in vessel nuclear fusion reactor components following the elastoplastic route
BO-006	Vishnu AMBIKADEVI RAJASEKHARAN NAIR	Structural integrity assessment of HCPB breeding blanket against exhaustion of ductility using the EU-DEMO Design Criteria for In-Vessel Components
BO-007	Wang YIQIANG	An overview of UKAEA activities in the development and implementation of EU-DEMO design criteria for in-vessel components
BO-008	Chris ELSE	Development of Innovative In-vessel Shielding for Fusion Tokamaks using Borated Water and Porous Tungsten
BO-009	Hiroyuki NOTO	An innovative repair technique for microcracked tungsten combining electrodeposition and hot isostatic pressing
BO-010	Sungyu KIM	Effect of Post-Heat-Treatment Conditions on Mechanical Properties of Hot-pressed Diffusion-bonded ARAA
BO-011	Chiwon KIM	Enhanced High-Temperature Strength of RAFM Steel through Tailored Heat Treatment
BO-012	Ludek STRATIL	The combined microstructure of ODS Eurofer and Eurofer steel for optimization of strength and ductility properties
BO-013	Teresa LEGUEY	Mechanical behaviour and microstructure of an ODS EUROFER steel produced by reactive synthesis
BO-014	Maria A AUGER	Corrosion behavior of ODS steel in stagnant liquid PbLi
BO-015	Massimo Emilio ANGIOLINI	Advanced Multilayer Coatings for Tritium Permeation Mitigation and Corrosion Protection in WCLL PbLi Environments
BO-016	Florian LEBENDIG	Electrodeposited Fe-W monolayers as a basis for graded tungsten enriched coatings for tritium-permeation blankets
BO-017	Ashwini Kumar MISHRA	Advancement of functionally graded W/steel coatings for DEMO and ITER First Wall applications
BO-018	Jinho BAE	Performance Evaluation of Alumina Coatings Applied on 316L and CuCrZr Surfaces in Bolted Joint Structures
BO-019	Kamlesh PATEL	Vanadium alloy to tungsten armour joining for fusion first-wall/blanket & plasma-facing components
BO-020	Danilo BEIERSDORF	Investigation of the Root Causes of Leakage in Additively Manufactured Water-Cooled Components for Plasma-Exposed Applications in Wendelstein 7-X
BO-022	Liang GAO	Tungsten carbides as near-plasma tritium diffusion barriers compatible for fusion reactors
BO-023	Zahra ABBASI	Cryogenic structural materials for next-generation fusion reactors
BO-024	Motoki NAKAJIMA	Overview of Environmental Strength Properties of Fusion Reactor Structural Materials
BO-025	Ziwei LI	Evaluation of neutron irradiated effects on advanced nuclear structural materials
BO-026	Sun-Young PARK	Microscale Tensile Behavior of Fe Ion-Irradiated Tungsten
BO-028	Hyung-Ha JIN	Irradiation Effects on Interfacial Properties of Tungsten-CuCrZr Divertor Monoblock Joints Under Ion Irradiation
BO-029	Makoto KOBAYASHI	Development of a Tritium Transport Prediction Code in Irradiation-Damaged Tungsten Considering Defect Accumulation and Multiple Hydrogen Trapping
BO-030	Priti KANTH	Prediction of Activation and waste generation from EU fusion plant concepts
BO-031	Elodie BERNARD	Waste management of tritiated materials: advances on tritium measurements capabilities to characterize physico-chemical mechanisms at stake

BO-032	Min PAN	Quantifying Orientation-Dependent Interfacial Stress Coupling in W-Cu Heterostructures for Fusion First Wall Materials
BO-033	Jie CHEN	Scaling-up industrial production of SMART Materials via Mechanical Alloying and Field-Assisted Sintering for First Wall
BO-034	Raphael DAVID-MENENDEZ	Comparative assessment of elastic and inelastic design rules for creep-fatigue and progressive deformation in fusion reactor first wall applications
BO-035	Annunziata Anna SATRIANO	Creep Assessment of CuCrZr Alloys and Pure Copper tubular samples
BO-036	Cholidah Akbar FITRIANI	Development of Small Punch Testing for Irradiated CuCrZr: Reconstructed Samples
BO-037	Peter COOPER	Assessment of fusion-relevant ductility exhaustion criteria for CuCrZr
BO-038	Theodora VASILOPOULOU	Benchmarking neutron transport and shielding performance in fusion-relevant concrete using VERDI activation detectors at ENEA FNG
BO-039	Davide FLAMMINI	The concrete shielding experiment at the Frascati Neutron Generator
BO-040	Shuhei NOGAMI	Modifying Tungsten for an Improved Radiation Shielding Capability and Mechanical Property
BO-041	Bradley YOUNG	Shielding solutions for fusion power plants: Manufacturing of modular tungsten and metal hydrides
BO-042	Pierdomenico LORUSSO	Manufacturing and Analysis of Tungsten Fiber-Reinforced Copper Composite Tubes for Divertor Targets
BO-043	Ralph LAUBE	Copper-Sealed Microwave Windows for Improved UHV Leak Tightness
BO-044	Nerea GARCÍA RODRÍGUEZ	Structural and environmental compatibility of 316L/316Ti-EUROFER97 TIG welds for DONES Target Assembly Backplate
BO-045	Dénes Zoltán ORAVECZ	Mechanical Interfacing and Vacuum Integrity: Integrating the Target Assembly into the IFMIF-DONES Test Cell
BO-046	Mauro CAPPELLI	IFMIF-DONES Central Instrumentation and Control Systems: Design Consolidation and Recent Advancements within the EUROfusion WPENS Framework
BO-047	Kohki KUMAGAI	Validation of source definitions for neutronics simulations using the JENDL-5 deuteron sublibrary for 5- and 9-MeV beams in the linear IFMIF prototype accelerator (LIPAc)
BO-048	James PITTARD	Native Protium Inventory and Desorption From Stainless Steel Pipework
BO-049	Ashwin PERSAUD	Effect of helium on tritium retention in Fe-Cr binary alloys and RAFM steels
BO-050	Vanessa DE CASTRO	Oxide nano-dispersion in ODS cold sprayed steels for advanced fusion reactors
BO-051	Young Ah PARK	Feasibility Study on Lithium Isotope Separation Using Crown Ether for Tritium Breeder
BO-052	Stefano SGOBBA	Progress in Material Selection and Assessment for the ITER Glow Discharge Cleaning (GDC) System
BO-053	Kieran MARTIN	Investigating the effect of thermal aging treatment on the tensile performance of V-4Cr-4Ti
BO-054	Carlos VIVO VILCHES	Ion-Laser InterAction Mass Spectrometry (ILIAMS) for the ultra-sensitive detection of long lived radionuclides produced by activation from DT neutrons
BO-105	Debashish SUR	Microstructure-Driven Corrosion Behavior of RAFM Steels in tatic Pb-Li Eutectic

H. Remote Handling ; Vessel/in-vessel Engineering

BO-055	Azman AZKA	Investigation into State of the Art of Remote Handling Compatible Bolt Threaded Connection Fastening Tooling Design
BO-057	Hyunmok SON	A Data-Driven PHM Framework for Remote Handling Systems Using Acoustic Sensing on a Motor Test Rig
BO-058	William BRACE	Data-driven stochastic inverse analysis for engineering problems using the finite cell weight variation method
BO-059	Raphael MITTEAU	Title Front face integration of the ion cyclotron travelling wave antenna in the main wall of WEST
BO-060	Elodie CORBEL	WEST Operation Shutdowns Schedule Optimization: Focus on Divertor Technical Interventions

BO-061	Michael VAN DE MORTEL	Fusion Orientated Robotic Technology
BO-062	Anurag SAIGIRIDHARI	Evaluating Deterministic Transport for LIBRTI Breeder Blanket Neutronics: A comparison with Monte Carlo Methods
BO-063	John CROFTS	Lawson Machine 26 – Center Current-Conducting Shaft
BO-064	Petri TIKKA	Reality Gap mitigation in Divertor Remote Handling
BO-065	Yohanes NIETIADI	Thermo-Mechanical Analyses of W7-X Cryostat System in Preparation for Long Pulse Operation

B. Experimental Devices and Facilities for Fusion Research

BO-021	Damian KING	Maintenance of Fusion Equipment Over Decades: The JET Experience
BO-066	Torsten BRAEUER	Conditioning of Wendelstein 7-X vacuum vessel
BO-067	Kwangpyo KIM	Establishment of Standardized Vacuum Conditioning Procedures Preparing for the Transition to a Full Tungsten Wall Environment
BO-068	Kihyun LEE	Enhancement of Time-Averaged Fe Ion Beam Current and dpa Rate at KAHIF through Molflow-Based Vacuum Optimization of a MIVOC System
BO-069	Johanna WYDRA	Measuring the reaction rate between hydrogen isotopologues with a spinning rotor gauge
BO-070	Michaela UHLMANN	Operation of the enhanced impurity powder dropper at ASDEX Upgrade
BO-071	Timo DITTMAR	The linear plasma device JULE-PSI: update on plasma operation and integration into a nuclear hot cell
BO-072	Saerom KWON	Advanced Variance Reduction Schemes for Dose Assessment Toward Licensing of 9 MeV Deuteron Operation in LIPAC
BO-073	David ŠESTÁK	Challenges and Adaptive Engineering in the Manufacturing of the COMPASS-U Tokamak Support Structure
BO-074	Clément NGUYEN THANH DAO	Exploring LTS and HTS Superconducting joint concepts with the SELFIE facility
BO-075	Roger RAMAN	Design Concepts for Solenoid-free Plasma Startup using Transient CHI
BO-076	Otto ASUNTA	LEAPS: Upgrades and upcoming experimental programme of high-field spherical tokamak ST40

F. Magnets, Cryogenics and Electrical Systems

BO-077	Alexander PETROV	Comparative evaluation of a resistive and superconducting central solenoid for STEP
BO-078	JUAN-FREDESVIDO RAMOS-DELGADO	Versatile Distributed Control Platform for the SMART Tokamak Upcoming Power Supplies
BO-079	Andrea CHIAPPA	Evaluation of Residual Stresses in Central Solenoid Layers Induced by the Manufacturing Process
BO-080	Thomas GALVIN	Performance and microstructural changes in high-energy SiC varistors induced by D-T neutron exposure
BO-081	Liu YUNHAO	Performance and Degradation Mechanisms of High-Jc Nb3Sn CICC for High-Field Applications
BO-082	Amélie GRUDINOVA	Thermal Dilatations-Based Engineering Solutions for High-Field Cryogenic TF Coils in the COMPASS-U Tokamak
BO-083	Anton NISCHLER	Engineering Feasibility and Structural Assessment of the ASPECT Tokamak with LTS Magnets in the DYT Framework
BO-084	Marianna DI PIETRANTONIO	Long-term energy projections for fusion magnets supplied by flux pumps
BO-085	Michael NAGEL	Finite Element Analyses of Thermal Stresses at Cooling Pipes During Cool Down of Wendelstein 7-X Cryo Vacuum Pumps
BO-086	Ben CONROY	Designing a Steady-State Cryogenic System for the STEP Prototype Plant
BO-087	Peter HARRIS	The challenges of the magnet system on the STEP tokamak
BO-088	Klaus-Peter WEISS	Test facility to determine the contact resistance at cryogenic temperatures of two connected superconducting fusion magnet cables under mechanical tensile load
BO-089	Georg SIROKY	Multiphysics analysis of a superconducting transformer for the EDIPO 2 Test Facility

BO-090	Hyun Wook KIM	Test Results of the 16 T SUCCEX Inner Coil Conductor in the SULTAN Test Facility
BO-091	Neil MITCHELL	Demountable Superconducting Coil Technology Enabling Maintainable and Upgradeable Fusion Power Plant Architectures
BO-092	Diego Armando GARFIAS DÁVALOS	Progress in demountable joint testing for high-current HTS cables
BO-093	Caoxiang ZHU	Designing, winding, and testing three-dimensional HTS coils for stellarators
BO-094	Silvia CESARONI	Factory Acceptance Tests of the Power Supply System for the DTT Non-Axisymmetric Coils
BO-095	Blake RABLAH	Lawson Machine 26 – Pulsed Power Supply Development
BO-096	Finlay CHRISTIE	Advanced high efficiency main high voltage power supply for the STEP Heating and Current Drive system
BO-097	Claus-Peter KÄSEMANN	Overvoltage protection of the new IGBT motor drive of ASDEX Upgrade's main flywheel generator EZ2
BO-098	Yifan ZHANG	Research on the Characteristics of Milliampere-Level Leakage Current Detection Technology in Strong Magnetic Field Environments
BO-099	Rumeng WANG	Analysis of the Characteristics of a High-Speed Solenoid Valve under Stray Magnetic Fields
BO-100	Kazuma FUKUI	Operation results of JT-60SA cryogenic system during plasma operation
BO-101	Benoit LACROIX	Impact of hydraulic boundary conditions on CS operation
BO-102	Caroline BENZIDANE	Rheological characterization of solid hydrogen extrusion for tokamak pellet injection
BO-103	Nicolas JACQUET	New developments of prototypes design of de-sublimation cold cell and associated cryostats for ITER disruption mitigation systems
BO-104	Samara LEVINE	Sequential Oxygen Ion Irradiation of REBCO Coated Conductors up to 6 mdpa: Benchmarking a Neutron Damage Proxy

E. Diagnostics

S1-18	Flavio CLARIZIA	Development of a fast SiPM-Based Arc Detection System for Fusion Applications
-------	-----------------	---

C. Plasma Heating and Current Drive

S1-01	David VELASCO DE LA FUENTE	A new control system for the TCV Diagnostic Neutral Beam Injector
S1-02	Ugo SIRAVO	A brand new power supply system for the TCV diagnostic neutral beam injector
S1-03	Alain SIMONIN	CIGALE: An innovative high efficiency neutral beam injector concept for future fusion power plants
S1-04	Andrew ASH	Beam power calibration and measurement of the beam properties of the MAST-U neutral beam long pulse upgrade.
S1-05	Araceli NAVARRO	Stability of Beam Properties during Long Pulses at ITER NBI, for Hydrogen and Deuterium operation
S1-06	Wook CHO	Long-Pulse Operation Performance of the KSTAR NBI-2 System
S1-07	Seulchan HONG	Development of NBI-Based β_N Feedback Control System with NBI-2 Power Modulation in KSTAR
S1-08	Peter SPAEH	Fastening and alignment concept of the structural components of the EC heating and control launcher for the EU DEMO LAR fusion power plant.
S1-09	Francesco FANALE	Optical design of EC antennas for a fusion power plant: method and concept
S1-10	Alessandro BRUSCHI	Development of a hybrid transmission line concept for a power plant EC system
S1-11	JongGab JO	Observation and Parametric Analysis of Lower Hybrid Fast Wave (LHFW) Coupling in KSTAR Plasmas
S1-12	Marco CAVENAGO	Efficient coupling of radiofrequency to negative ion source plasmas
S1-13	Thomas FELLINGER	Stripping losses in the negative ion source ELISE: analysis, simulation and design for their reduction
S1-14	Junichi HIRATSUKA	Application of electron fence for reduction of co-extracted electron for the negative ion source of JT-60SA
S1-15	Joao Paulo FALCAO DE QUEIROZ	Alternative caesiation method for a half size ITER Negative Ion Source
S1-16	Brendan CROWLEY	Toward a Next-Generation RF Ion Source for the DIII-D Neutral Beam Injection System
S1-17	Kirtan DAVDA	Design and Modeling of the AMAROK High-Power Neutral Beam Positive Ion Source development platform
S1-19	Ranieri MARINARI	Numerical design activities in support of the DTT ICRH antenna
S1-20	Fabrizio VERRUA	Analysis, optimization, prototypes manufacturing and testing of the ion cyclotron resonance heating (ICRH) antenna
S1-21	Julien HILLAIRET	Final design of the WEST ion cyclotron travelling wave heating system
S1-22	Dimitri TAITURIER	Design and Structural Analysis of the Ion Cyclotron Travelling Wave Array for WEST
S1-23	Tristan BATAL	Thermo-Hydraulic and thermal-structural analysis of Actively cooled Ion Cyclotron Travelling Wave Array for WEST
S1-24	Silvia GARITTA	WEST Tokamak 3D FEM Electromagnetic Analysis
S1-25	Daniele BUSI	Dynamic modelling of the Remote Centre of Motion compliant steering mechanism of the EU-DEMO ECH Mid Steering Antenna
S1-26	Michael ROSS	Expanding the DIII-D ECH system to 10 gyrotrons
S1-27	Alexandre DUPUY	Upgrades and Experimental Results of the DIII-D Helicon RF System
S1-28	Lorenzo MILIA	Speeding up beam simulations with Physics-Informed Neural Networks: a proof-of-concept approach to solve the Poisson equation for negative ion beam simulations
S1-29	Emmanouil DELIPRIMIS	Simulations estimating the space-charge neutralization level in the 1.5 MW & 1 MW 140 GHz gyrotrons for the W7-X stellarator
S1-30	J��r��mie DUBRAY	Anode power supply development for triode type gyrotrons at TCV

S1-31	Luis Alberto DE SOUSA MOREIRA	Modernizing the FALCON Body Power Supply (BPS)
S1-32	Saul GARAVAGLIA	Progress on DTT ECRH: from gyrotron testing to load integration
S1-33	Florian MIRALLES	Engineering based model for ECRH heating system integration
S1-34	Alessandro MORO	ECRH and ICRH studies for the Novatron magnetic mirror fusion device
S1-35	Shaun HARTE	Integrated optiSLang workflow for the design and analysis of microwave launcher optical mirror systems
S1-36	Yasuhsia ODA	A conceptual design of ECCD launcher for JA DEMO
S1-37	Tindaro CICERO	Hot Isostatic Pressing (HIP) for the manufacturing of the Blanket Shield Module (BSM) of the ITER Electron Cyclotron Upper Launcher (ECUL)
S1-38	Mei HUANG	Recent Status and Upgrade Plan of Electron Cyclotron Resonance Heating and Current Drive System on HL-3
S1-39	Stefan ILLY	Fast Switchable Dual Harmonic Gyrotron Operation for Versatile Plasma Heating and Stabilization
S1-40	Benjamin ELL	KIT Development on Gyrotron Multistage Depressed Collectors
S1-41	Sebastian STANCULOVIC	KIT's integrated approach to progressive cooling of cavities in fusion MW-class gyrotrons
S1-42	Gaetano AIELLO	Brewster-angle window: design verification with largest-to-date diamond disk and experimental loss tangent distribution
S1-43	Andreas MEIER	ITER torus diamond discs: dielectric and optical characterization
S1-44	Avelino MAS SÁNCHEZ	Prototype and testing of the actively-cooled flexure-pivot concept for the DEMO ECH steering mirror
S1-45	Johan Willem OOSTERBEEK	MISTRAL assessment of stray radiation shielded enclosures
S1-46	Sandra GRECO	Recent Progress in the Conceptual and Electromagnetic Design of a Vacuum Feedthrough Developed for the DTT ICRH System

K. Safety and Environment, Socio-economic studies and Technology Transfer

S2-01	Martina MOLINARI	Safety Approach and Preliminary Analyses in Support of the Design of the VNS Facility
S2-02	Patrick CALDERONI	The expansion of fusion safety research activities at the Idaho National Laboratory to support the accelerated deployment of fusion energy
S2-03	Junmin YANG	AI-Driven Engineering Knowledge Base and Agentic Workflow System for Accelerating Technical Activities at ITER
S2-04	El Mehdi GHARDI	Identifying Dominant Radiological Risk Drivers in Fusion Power Plant Source Terms
S2-05	Dirk RADLOFF	Comparison of the radiological hazard potentials of high-activity sealed radioactive sources, nuclear facilities and fusion facilities
S2-06	Joachim HERB	Main outcomes from the German pilot project ReFus on the regulation of fusion facilities
S2-07	Florian PRIESTER	From Surface to Bulk: The MELTE Project for Deep Detritiation of Fusion Components
S2-08	Yugyeong KIM	Application of ASME Section VIII to the Manufacture of ITER Nuclear Pressure Equipment under Module H1
S2-09	Young-Jun HYUN	Application of an EQ Procedure for ITER HVAC Equipment in Safety-Related System
S2-10	Sven DEGENKOLBE	Explosion safety for the Wendelstein 7-X central exhaust system
S2-11	Arkady SERIKOV	Nuclear safety and radwaste aspects of the IFMIF-DONES lithium target assembly
S2-12	Matteo D'ONORIO	System-Level Multi-Fluid Modelling of the ITER Water-Cooled Lead-Lithium TBM with MELCOR-TMAP
S2-13	Filip JANKY	Enhancing tokamak operation training through multi-role interactive simulation using SOPHIA
S2-14	Gheorghe BULUBASA	Effect of Packing Architecture on H ₂ -O ₂ Recombination Efficiency in a Trickle-Bed Reactor under Distributed Hydrogen Injection
S2-15	Martín GORRIARAN	NuclearVerse: A comprehensive VR toolchain for Fusion Maintenance
S2-16	Luigi CANDIDO	Development of Innovative Modular Bioshield Using Open Cell Metal Foam Composites for Fusion Applications
S2-17	Danilo Nicola DONGIOVANNI	MELCOR and ASTEC codes benchmark study of ex-VV LOCA accidents impacting DEMO tokamak building.
S2-18	Walter SHMAYDA	High TRL Tritium Handling Subsystems for Demonstration Fusion Machines

L. Alternative fusion technologies

S2-19	Subrata PRADHAN	SPiZF: A Private Fusion Initiative in India
S2-20	Jieqiong JIANG	Overview and prospects for fusion fission hybrid system development in China
S2-21	Michael LONDESBOROUGH	Boron Hydrides: A Fuel of Choice for p-B Fusion?
S2-22	Marcel EHN	Laser borane and plasma studies with B ₁₈ H ₂₂ derivatives
S2-23	Christian BRADLEY	The FLARE Reactor concept: Shock management and neutronics
S2-24	Olena TURIANSKA	First French fusion project based on modern open magnetic traps
